

# **IMPORTANT!**

This electric kit has to be installed by a professional workshop or a suitable qualified person.

The installation instructions must have been read and fully understood before the start of any installation. Please contact your wiring kit provider or the hotline shown in the footer should you need assistance!

Make sure the vehicle is approved/homologated by the manufacturer to tow a trailer!

Also please check that there is a definite compatibility between this vehicle and the electric kit!

Following the installation of the electric kit, the fitting instructions should be kept together with the vehicle service document and vehicle handbook. The fitting instructions contain important information relating to the use and function of the towing kit as well as for any diagnostic or activation process, that might have to be repeated in the future (e.g. after the performance of a vehicle software update).

All warranty claims will be forfeited if the electric kit or components contained therein are used incorrectly or modified. If a towing socket adaptor has been used to connect to the trailer or bike rack, this must be removed from the trailer socket once the trailer or bike rack has been disconnected.

If the trailer or bike rack is not equipped with a rear fog lamp, depending on the towing vehicle type, the correct function of the towing kit cannot be guaranteed. In such cases, a rear fog lamp should be retro fitted.

This towing electric kit will not be covered under warranty if any technical or electrical modifications or software updates have been performed by the vehicle manufacturer after the initial commissioning of the kit. That applies especially to modifications or updates which may cause malfunctions in the trailer socket or any other part of the trailer electrical equipment!

Depending on the type of trailer module used in this electric kit, diagnostic interrogation with the vehicle's electrical system may be limited or will not function. The error memory inside the trailer module may not be able to be accessed by vehicle manufacturers diagnostic system.

Error logs relating to the trailer electrical equipment, that may be generated in the vehicle manufacturers diagnostic system as a result of a test procedure, may be due to the incorrect installation of the towing electric kit or the false activation of the trailer module.

We always recommend whenever possible, the following troubleshooting process:

-> An analysis of the vehicle's error memory and possibly clearing of all faults before the start of the installation!

→ Try disconnecting the trailer module from the towing harness and re-start the fault clearing process!

➔ If in doubt, limit the time for troubleshooting to a max of 0,5 hours and call our Technical Support Team!

Please follow our instructions carefully and always test the towing electrics using a true lighting board or a specifically designed bulb tester. If an LED tester is used, ensure it is equipped with correct load resistors or malfunctions will occur!

### SYMBOL EXPLANATION

- <u>Ö</u> -	Left (58-L) respectively Right (58-R) tail light			
54 STOP	Stop light (54) / high mounted, third stop light (54)			
	Turn signal indicator left			
	Turn signal indicator right			
Ę	Rear fog light(s)			
Reverse 05	Reversing light(s)			
30+	Permanent power supply / 13pin socket, chamber 9			
15+	Charging wire for trailer battery / 13pin socket, chamber 10			
	Trailer / trailer recognition			
B+/30	Permanent current power supply			
Ļ	Ground or Earth (31)			
$\overline{\bigcirc}$	Ground connection battery terminal lug			
•	Positive connection battery terminal lug			

	Cigarette lighter / accessory socket					
	Loudspeaker / buzzer					
	Park Distance Control					
	Switch / source of function					
•	Connect together					
<b></b>	Disconnect					
Ą	Look at / See further information					
	Look carefully at selected area					
$\checkmark$	Present / Occupied / OK					
$\mathbf{X}$	Not present / Not occupied / Not OK					
D ((((	Acoustic indication					
$\triangle$	Attention / important advice					
20 Amp.	Fuse / fuse capacity 20 Ampère

## All Models

#### General

After the installation of the electric kit, the obligatory trailer lighting, Towing vehicle and trailer stabilisation, as well as the trailer indicator control which is statutory in a several countries are guaranteed without having to make any connections on the vehicle!

#### NOTE:

In order for the rear fog light to cut-o automatically on the towing vehicle whilst a trailer/bike rack has been connected, diagnostic programming of the extended trailer functions together with optional assistance systems must be performed. Please proceed with the coding as follows:

#### Step 1:

#### Supplement optional extras via "Input for retrofit and conversions":

Add special equipment codes:

- + **Q10** cross member for trailer hitch (trailer load up to 2t)
- + Q22 ball head fixed
- + **Q50** ball head removable
- + **QA0** trailer hitch screwed for 2,8t trailer load
- + QA7 trailer hitch for increased trailer load 3.5t
- + QA8 trailer hitch fixed for increased hitch load (2.8t / 3.0t GVWR)
- + E40 trailer socket 7 pin
- + E43 trailer socket 13 pin

Remove existing optional extras code E57 (electrics for trailer socket)

#### Step 2:

- 1. Connect STAR DIAGNOSIS to car
- 2. Start program
- 3. Click "Controllers View"
- 4. code installed control units as follows:
  - a. Click e.g. **"EZS"** (Ignition)
  - b. Click "Adjust"
  - c. On the left side:
  - click updating SCN encoding
  - d. Go online a wait a few seconds
- 5. Perform the operation with all the control units listed below:
- "EZS" (Ignition)
- "SAM" (Signal detection- and control modul).
- "combined instrument"
- "ESP" (Electronic Stability Program)
- "CPC" (Control Unit "Powertrain")

#### if fitted:

- "AUDIO" (car radio)
- "PTS" (Parktronic)
- "reversing camera"
- Coding finished
